

DDC-2000 controller

The DDC-2000 is a 4-deck MIDI controller with built-in sound card for PC and Mac. The 2-channel mixer features 3-band kill EQs, gain controls and filter modulation.

The built-in USB sound card enables two high-quality stereo outputs (master and headphones) and two stereo inputs for connecting CD players and turntables. The inputs can be used for timecode vinyl and CDs in a DVS setup or routed to the software as additional line inputs. Microphone and AUX input are attached as well.

The integrated DVS audio system makes it possible to directly use timecode systems with vinyl or CD under Virtual DJ and other open programs with only one USB cable. Users of Traktor and Serato can connect their own sound cards.

MIDI USB PCconnect

No. 11045050
