

# ONE FOR ALL

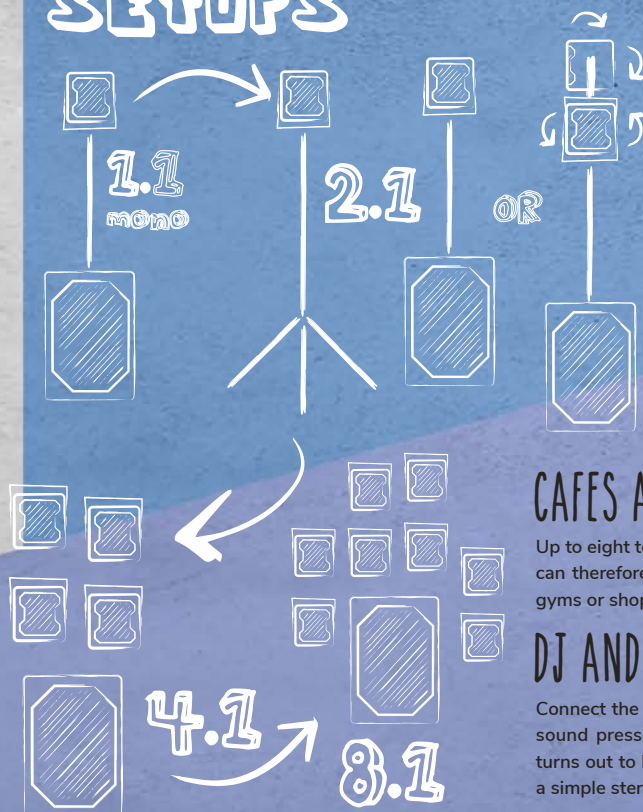

Compact loudspeaker system for a wide range of applications

With the boxes of the BOB-series you get a compact, efficient and economical PA-system, which is suitable for various applications. Use it as a full-range PA for small gigs, as-a keyboard or e-drum monitor, for installation or as a compact system for DJs.

Whatever you are up to: BOB always delivers a clear, assertive sound while taking up little space.

## SETUPS

## GIGS

Choose a BOB speaker system to entertain your audience of up to 50 people. In the blink of an eye, you can mount your speakers on a pole and a tripod stand that allows you to perfectly align your satellites with your audience. You can also use BOB as your personal monitor. The "Twin Set" with two BOBs is the perfect package for your performance in front of up to 100 people.

## CAFES AND SHOPS

Up to eight top speakers can be operated with one subwoofer. You can therefore also realise installations, for example in small cafés, gyms or shops.

## DJ AND PARTY

Connect the two satellites to a compact mono system with higher sound pressure or separate the two in a stereo rig. If the party turns out to be a bigger thing, simply connect two BOB subs with a simple stereo cable.

## LECTURES AND PRESENTATIONS

The BOB system is also ideal for presentations and lectures. In most cases you only need the basic system for presentations and speeches. Simply place the satellites on the subwoofer and you're ready to go. Or mount the satellites on a tripod to align the system with the audience.
