

# UHF-100

## MICROPHONES

### Talk to me!

Good, affordable and reliable: these are no opposites, but the attributes of our new microphone series, the **UHF-100**. Altogether, there are eight frequencies to choose from. For a better overview, all microphones are marked with a color – and every color stands for a specific frequency. There are three different models of receivers: a one channel version, a two channel and a four channel receiver. Using the two channel

or four channel versions, you can also give out a signal mixed of several microphones directly, besides the usual single output. For all receiver types, there are matching rack installation brackets. Using them, you can build one or two receivers into a rack with only one unit in height. Pocket transmitters, lavalier and headset microphones for each frequency are available.

- Very easy to use
- License free and future-proof in large parts of the EU
- Bodypack optionally available
- XLR and jack output
- Rack angles available for one or two systems
