

Now without diethylene glycol (DEG)

Diethylene glycol, a substance which is often used in smoke fluids, was recently rated as hazardous substance by the European Union and classified higher regarding toxicity. According to this, new tightened labeling obligations have already come into force.

We reacted on that a developed an additional fluid without DEG. It has the same effect as the ones with DEG, but with the new fluid you ensure legal security and prevent legal disputes, liability claims, stiff penalties and health problems – this is why we really warmly recommend to use the new fluids.

At Eurolite, we test our fluids stringently. And in addition, we let independent bodies continuously check the liquids.

Everyone using our smoke fluids places his trust in us. We pay it back with rigid controls of these liquids – and both sides win.
