

## LED Confetti Storm

A different kind of storm. This is what you will experience with the LED Confetti Storm machine. Confetti is blown out up to 5 meters high and wide, producing a real confetti whirl. Whether you use it for award ceremonies, for carnival parties or parades, this effect will impress everybody.

You control the machine with a remote control or via DMX. Refilling the tank is so easy and done within a minute. In addition, the confetti can be illuminated with 6 powerful LEDs, which are placed on the machine's nose. The color mixture is made out of red, green, blue and amber.
