

eurolite[®] Press Release – January 20, 2011

New member – Eurolite TMH-10 with 60-watt LED

Eurolite enlarges its successful series of LED moving lights. New leader of the pack: the Eurolite LED TMH-10, available from now on.

The TMH-10 features a modern 60-watt LED. Furthermore, it impresses with other technical specifications: a power consumption of eco-friendly 170 watts or a small weight of less than 8 kilograms. As a consequence, the TMH-10 is perfect for places with limited technical and mechanical options as well as for mobile use.

The range of functions, however, was not reduced. Among other things, the 12 DMX channels show control options for the 3-facet prism, the color wheel with 7 colors (plus open), the gobo wheel with 6 rotating gobos (plus open) and separate channels for strobe and dimmer. For stand-alone operation, Eurolite provides programmed scenes with variable speed.

As additional multifunctional spotlight in the family, the TMH-10 is a powerful alternative to its brother, the well-know TMH-3.
