

## Bright, efficient, low maintenance

The two architecture spotlights are IP 65 certified, so they are dustproof and protected against jet water. They have no fans or other mechanical parts that need to be serviced. Therefore they are ideal, even permanently, for outdoor use. The floods are equipped with 72, or respectively 96, state-of-the-art high-performance LEDs. The diodes generate tremendous brightness with very low power consumption.

The light radiates very wide with 120° and is therefore suitable for the illumination of large buildings and surfaces. The color temperature is cold white at 5000 Kelvin, but is not too bluish. Also, the color rendering index is very high with a value of over 80.

**NEW** IP65 CW SMD 120°

No. 51833556

**FUTURELIGHT LED PRO IP Flood 72**

Weather-proof outdoor floodlight (IP65) with 72 cold white high-power LEDs

**NEW** IP65 CW SMD 120°

No. 51833557

**FUTURELIGHT LED PRO IP Flood 96**

Weather-proof outdoor floodlight (IP65) with 96 cold white high-power LEDs
