

QuickDMX

Cables can be annoying sometimes. With the Eurolite Quick DMX system, you can forget the cables; the DMX signal is transmitted wirelessly. The signal can be sent to several receivers and several systems with different DMX universes can be operated simultaneously.

The new EUROLITE QuickDMX Wireless transmitter/receiver can be used as transmitter or as receiver. It makes the wireless transmission of up to 512 DMX channels possible and switches automatically between transmitting and receiving operation. Besides eliminating the cable chaos, it saves you time and nerves.
