

DMH-200

Great power with huge LED!

It is one of the brightest moving heads ever offered by Futurelight. The light source, however, will surprise you. Inside no discharge lamp is used, but a 200 watt LED. This can easily replace MSR lamps with 1200 watts of power. Even modern discharge lamps like the Platinum 15R or the Sirius HRI 280 are not inferior in light output.

You can access a total of 14 images that are on 2 gobo wheels. There are 7 rotating gobos on the first wheel and they are interchangeable. Replacing these gobos is quite easy, thanks to a slot system. You do not even need special tools.

The choice of gobos is such, that you have interesting images for both projections and beam shows at your disposal. By the way, if two gobos lie on top of each other, you can use the motor focus to create perfect morphing. The one gobo is thus like in a cross-fade into the other gobo. With the rotating 3-facet prism you can triple the images and create an additional dynamic. Colors are provided by 8 dichroic color filters.

FUTURELIGHT DMH-200 LED Moving Head

PRO beam/wash Moving Head with 200 W COB LED and large zoom

With optional upgrade
WIRELESS SOLUTION
MADE IN SWEDEN

Outstanding is the huge zoom range. With the DMH 200, you can adjust the beam angle from narrow 7.5 degrees to a very wide 40°. From the narrow beam in fog, a huge projection on a screen can be seen in a fraction of a second. In addition, the spotlight has a stepless frost filter, which you can also use as a washlight. Despite the filter, the soft light is still bright and assertive.
