

Stage Element

Ready for Open Air! The BE-1 is a stage element that can also be used outdoors. The plate is made of 12 mm thick birch multiplex. It carries 750 kg per square meter.

You can choose from a large number of accessories. There are fixed feet from 20 cm to 120 cm height available as well as telescopic feet up to 140 cm in height. You can join the elements together using retractable connectors and connection clips. Also for the feet there are connection systems for stable constructions.

To avoid falls and to provide additional security, there are various stage railings to choose from. Also, you can rely on an adjustable staircase with matching railing. Of course, various attachment materials for the accessories and a matching trolley for the stage elements are available.
