CP-Serie

ELA mono mixing amplifiers with a compact design for applications where only little space is available, this is how the **Omnitronic CP** series is described best. The amps are available with 30, 60 and 120 watts. They are equipped with an audio player with USB-port and SD-slot and also a Bluetooth receiver as well as a FM-tuner with auto scan.

You can choose between mains and 24 V operation and between speaker connections for 70 V, 100 V and also low-resistance speakers. In combination with the remote control you can call the **CP mixing amps** little multi talents.
