## Description:

A cross section of $2 \times 0,50 \mathrm{~mm}^{2}$ makes this cable ideal for theatres, public buildings etc.
Because of its $100 \%$ shielding and its thick outer jacket the SC-Primus is also recommended for installation in discos and night clubs, because neither the aggressive nicotine nor high temperature fluctuations can hardly affect this cable. Performing artists swear by this cable, rental agencies prefer the SC-Primus because of its sturdiness and intrinsic torsion, making manual wind-up a cakewalk.

## Features:

- Optimum transmission quality even with excess lengths due to the large wire gauge of $2 \times 0.5$ mm²
- 100 \% shielding due to dense helical copper mesh screen and extra metallised fleece
- Great durability due to the thick jacket with a diameter of 6.5 mm
- Broadcasting and OB van technology, building installation
- Professional studio technology
- Made in Europe
- For application areas such as: Stage
