Description:

Everything but wishy-washy!

A very powerful light, an immensely homogeneous color mixture and a leveled saturation: these are the attributes that mark the new FUTURELIGHT PHW-750E PRO-Head WASH and sets it apart from the mass of conventional strobes. In addition, the electronic ballast reduces the device's weight and facilitates a flicker-free projection, that lives down the annoying twinkling in television studios for example. A motorized zoom and a mechanic dimmer as well belong to the ample equipment like a color-wheel with 5 different, dichroic color-filters (and white) and an additional UV-filter or correction-filters. The built-in beam-shape effect is kind of a special treat, as the wide and flat beam can steplessly be rotated by 360°. So, there is the possibility to either rotate or define a starting position.
